

--Exercise 15 - SQL Joins

-- Write a SQL query to display the customer name, customer city, grade, salesman, salesman city. The results should be sorted by ascending customer\_id.

```
SELECT orders.ord_no, orders.purch_amt, customer.cust_name, customer.city
FROM customer
LEFT JOIN orders ON customer.customer_id = orders.customer_id
WHERE orders.purch_amt BETWEEN 500 AND 2000;
```
